#### SUPPLIER:

Premier Concrete Products, Inc.

#### TECHNICAL DESCRIPTION:

Product: ShoreFlex®  
Underlayment: Fill Dirt / Aggregate  
Square Feet: 1200 SF  
Installation Date: 2019

### PROJECT DESCRIPTION:

A resident of Carencro, Louisiana was experiencing issues concerning erosion spurred by wind-driven waves on the pond by his property. The constant eroding was unsightly and beginning to put the property at risk of expensive damage as it neared the driveway. The property owner wanted a permanent solution to the problem without installing an eyesore.

### PROBLEM:

Perpetual erosion from the resident's pond was beginning to put private property at stake, risking extensive, costly damage as it approached the driveway. The resident was concerned the solution would be expensive and unsightly, so they reached out to Emerald Bayou Construction for consultation on the most suitable alternative to protect the property from further erosion.

### SOLUTION:

After sorting through the various alternatives, the resident decided the riprap would be unsightly and hard to maintain. After consulting with Emerald Bayou Construction, the resident chose ShoreFlex to resolve the issue. ShoreFlex's environmentally friendly design allowed for vegetation to grow through the concrete blocks, keeping the yard green and leaving no obstruction to the property. The contractor removed a few inches of soil over the project site to level the ShoreFlex with the rest of the property. The installation was easy and left the customer very satisfied with the final result and product quality.
